

take advantage of a COMPLIMENTARY DESIGN CONSULTATION

You may find yourself so overwhelmed by the number of images that you love from your session that it seems impossible to choose what to hang on your walls!

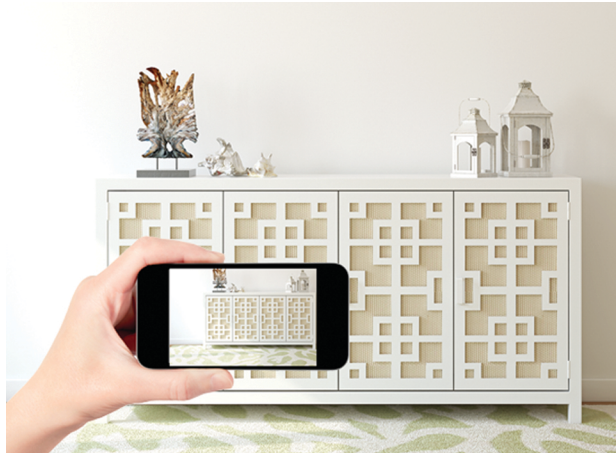

Not to worry - I am happy to assist you with narrowing down all of your favorites. I am also proud to offer a complimentary wall art design consultation during your ordering session. My studio has invested in unique visualization software that takes all the guesswork out of the process by showing you exactly what your images will look like on the walls of your own home! It's easy, just follow these simple steps:

learn three simple steps to prepare for your personalized design consultation.

1 TAKE PHOTOS OF YOUR WALLS

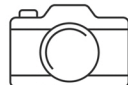

Walk around your home and take images of any blank wall space that would make a good space to display wall art from your session. Be creative! Even small nooks can be instantly transformed by the addition of a photo or cluster of photos.

It doesn't need to be perfect..

Even a smartphone image will do (and might even be easiest because you can text it to me right from your phone!) Regardless of which camera you use, follow these tips to give the best backdrop to work with during our consultation:

BE A STRAIGHT SHOOTER

Stand directly in front of the wall and take the shot straight on. Our software overlays the images in 2D, so images that are taken at an angle to the wall will not look as realistic as those taken dead straight.

WHAT TO INCLUDE

Back up as much as you can to get more of the room details in the image. This imparts a sense of scale to the design software which helps us pick the perfect size for your space! If your camera does not have a wide angle lens, your cell phone may actually be preferable. Try both and see which includes the most in the frame.

TIMING MATTERS

Though we can work with any image, images with as much natural light as possible will look the most realistic. Try to take the images at the time of day when your rooms have the most natural light and avoid flash unless absolutely necessary.

2 MEASURE UP

In order to calibrate your room images, we need to know the exact width of an object in the room. I recommend using a 3x3 post-it note. Post the note on any walls you would like to design and then take your picture. If you don't have a post-it, you can use any one object in the room such as the width of your couch, fireplace, table or any element that is up against the wall where the images will be displayed.

tip

If there is nothing to measure or you don't have a measuring tape handy, just tape a standard size piece of paper to the wall before snapping the shot - I can use that paper as our guide when scaling your image!

3 TAKE NOTE & Send!

Jot down your measurements in the space provided below as you take your images. Then bring this card to our session or email the measurements with your room images to me using the contact information to the right.

| ROOM | OBJECT | WIDTH |
|------|--------|-------|
| | | |
| | | |
